EDUCATION

Keshav Memorial Institute of Technology

Bachelor of Technology in Data Science

CGPA: 8.54/10

Hyderabad, India

Aug 2023 – Jul 2027

EXPERIENCE

DrugParadigm

AI Intern

Hyderabad, India

Feb 2025 – Dec 2025

- Contributed to PROTAC-INVENT, a reinforcement learning-based molecular generative model for de novo PROTAC linker design targeting protein degradation therapeutics.
- Integrated docking-based scoring and 3D shape similarity components using RDKit, DockStream, AutoDock Vina, and Roshambo for molecular optimization workflows.
- Developed GPU-accelerated Flask API for high-throughput molecular scoring, enabling parallel multi-GPU inference with Roshambo shape similarity.
- Implemented OpenMM molecular minimization pipeline with restraints support for post-docking energy optimization of generated compounds.
- Extended open-source reinvent-scoring package with RDKit-based alternatives to proprietary ROCS software for 3D shape similarity scoring.

PROJECTS

Reinvent-Scoring: Enhanced Molecular Shape Similarity Components

GitHub

- Forked and enhanced reinvent-scoring package with GPU-accelerated Roshambo and RDKit-based shape similarity components as open-source alternatives to OpenEye ROCS.
- Implemented parallel multi-GPU processing for high-throughput molecular shape scoring with configurable environment paths and conformer generation.
- Designed PROTAC-specific scoring workflows supporting multiple reference files for warhead and linker optimization in molecular generative models.

Emotilearn: Emotion-Aware Learning System for Dyslexic Children

GitHub

- Built real-time facial emotion recognition system using DeepFace and Hugging Face Vision Transformer (ViT) for classifying student emotional states.
- Developed full-stack web application with React, Node.js, Express, and MongoDB for webcam-based emotion tracking and adaptive learning recommendations.
- Created interactive dashboard with data logging and progress reports enabling teachers to monitor student engagement and emotional patterns.

FixMyHyd: AI-Powered Civic Issue Reporting Platform

GitHub

- Developed AI-powered civic issue reporting system using Google Gemini API for automatic image analysis, voice transcription, and issue categorization.
- Implemented multi-language support (Telugu, Hindi, English) with voice-to-text conversion and smart priority assessment for complaint triage.
- Built Flask backend with SQLite database, RESTful APIs for citizen and admin dashboards, and automated formal report generation for GHMC submission.

Nivasa: Hotel Booking Platform

GitHub

- Designed and implemented full-stack hotel booking platform using MERN stack (MongoDB, Express, Node.js, EJS) with responsive Bootstrap UI.
- Integrated geocoding and map features for location-based hotel search with secure third-party authentication and session management.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, JavaScript, SQL

Web Development: React.js, Node.js, Express.js, HTML, CSS, Bootstrap, REST APIs

AI/ML: Machine Learning, Deep Learning, NLP, Reinforcement Learning, Generative AI, LLMs, Transformers

Computational Chemistry: RDKit, DockStream, AutoDock Vina, Roshambo, OpenMM, Molecular Conformer Generation

Databases: MongoDB, MySQL, SQLite

Tools & Platforms: Git, GitHub, Docker, Jupyter Notebook, VS Code, Postman, Flask
